LATEST IMC BOTTLE COOLERS COOL BEER FASTER

IMC, Europe's leading designer and manufacturer of bar equipment, has launched new versions of its high quality range of Mistral bottle coolers. The latest Mistral units feature even quicker pull-down times, so bottled drinks can be chilled and served faster, and an improved more robust design that enhances long term reliability and reduces maintenance costs to a minimum.

The Mistral range of single, double and triple door bottle coolers has been developed for use in pubs, clubs, bars and restaurants. Each unit is available in a choice of stainless steel or painted silver or black finishes, each of which offers a stylish, contemporary appearance that complements both modern and traditional bars alike. Perhaps as importantly, Mistral bottle coolers are built to be long lasting, hygienic and easy to keep clean.

The new units incorporate the latest forced-air cooling technology, so bottled and canned drinks are quickly and consistently chilled from ambient or cellar temperatures to an ideal serving temperature of 4 °C.

In addition, the new versions of Mistral now incorporate robust electro polished steel door hinges; these considerably extend operating life when compared with the hinges used in competing low cost bottle coolers and make it far simpler to clean and service each unit. Ease of cleaning is further enhanced by the use of a new design of door

gasket that is easy to remove and refit and helps to ensure that temperature and cabinet efficiencies are maintained at optimum levels.

Additional features include an efficient refrigeration system that incorporates automatic defrost cycle and condensate evaporation, plus a revised light assembly that makes lamp replacement quick and simple. Rigid wire bottle shelves are standard, with options being solid doors, wine shelves, extra bottle shelves and an internal temperature display.

Mistral bottle coolers are fitted with lockable doors as standard, providing high levels of security, with the larger units being mounted on casters, making them easy to move even when full.

The high quality Mistral range can be purchased as part of a complete bar solution or on an individual replacement basis, and is perfect for use in busy bar environments where high volume bottle storage and quick and consistent cooling are necessary to meet high demand at busy times.
